## RESEARCH INTERESTS

- My research explores how AI can move beyond benchmark performance toward efficient, reliable systems for medical imaging and clinical workflows. I develop compact and adaptable vision models, multimodal reasoning methods, and workflow-oriented agents, with a focus on model compression, knowledge transfer, and robust learning from heterogeneous and longitudinal medical data. More broadly, I study how these methods can support practical and trustworthy AI deployment in healthcare.

## EDUCATION

- **University of Alabama at Birmingham** *Aug 2022 – Present*  
*Ph.D. in Computer Science, GPA: 4.0/4.0* Birmingham, AL, United States
- **Syracuse University** *Sept 2017 – May 2019*  
*M.S. in Computer Engineering, GPA: 3.867/4.0* Syracuse, NY, United States
- **North China Electric Power University** *Sept 2012 – May 2016*  
*B.S. in Electrical Engineering, GPA: 3.47/4.0* China

## RESEARCH EXPERIENCE

- **University of Alabama at Birmingham** *Aug 2022 – Present*  
*Doctoral Researcher in Computer Science* Birmingham, AL, United States
  - Developed efficient medical AI models and longitudinal-data benchmarks, including region- and context-aware distillation that produced sub-10M-parameter 3D segmenters while preserving downstream performance and evidence-grounded temporal reasoning over complex patient trajectories.
  - Analyzed pathway-specific Golgi morphology in ImageStreamX imaging-flow-cytometry data, developing interpretable deep learning models for signaling-pathway classification and generalization to unseen compounds.
  - Developed federated and decentralized learning methods to address client heterogeneity through personalized training, representative knowledge sharing, and efficient cross-client collaboration.
  - **Outcomes:** One MICCAI 2026 paper received an Early Accept (top 9% among 4,601 submissions) and was selected for a Spotlight presentation; one paper was published in the Q1 journal *Intelligent Systems with Applications* (ISWA).

## PROFESSIONAL EXPERIENCE

- **Citi Group** *Dec 2020 – Aug 2022*  
*Java Full Stack Developer* Shanghai, China
  - Led full-stack development of an SMA platform supporting Basel IV operational-risk calculations using Spring and Java on the backend and Angular and JavaScript on the frontend.
  - Designed and integrated Oracle database workflows while delivering internal requirements in both waterfall and agile development environments.
  - Mentored and led new team members contributing to internal web projects for the Shanghai organization.

## INVITED TALK

- **WNAR/IMS/Graybill 2024 Conference** *June 12, 2024*  
Colorado State University Fort Collins, CO, United States

## TECHNICAL SKILLS

**Programming:** Python, C++, C, Java, C#, SQL, JavaScript  
**Frameworks and Tools:** PyTorch, Spring, Angular, Oracle, HTML, CSS
